12.7BAND-25M	13mm	25	201 St.St.	50	Steel ZP

Instructions for use

Clamp Banding Instructions

1

1. Determine the length of the band required to fit your application and cut using a suitable tool.

2

2. Slip the housing over the band with 3cm protruding.

Engage the housing tang into the slot.

3

3. Take the other end of the band and position at the rear of the housing, ready to be tightened. Complete the assembly by turning the screw to engage the band.

4

4. Place the Clamp onto the application and tighten the clamp until the required tension is achieved.

Once the clamp has been fitted we strongly recommend you cut off any excess band to ensure the clamp is fitted tidily so as not to damage the application or others.

An easy to produce Worm Drive Hose Clip of any size in seconds!
